

BAND SHELTER

VETERAN'S PARK BAND SHELTER

OOSTBURG, WI

We were asked to design a new band shelter for the Village of Oostburg Veteran's Park. The old band stand is small, not accessible, and was no longer serving the needs of the village. The public restrooms in the park were also old and in need of repair. The plan was to build a new band shelter and restrooms that were fully accessible and would better serve the many functions that happen at the park.

The new band shelter has large accessible toilet rooms and a 800-sq. ft. stage. Lighting and a new sound system were also incorporated into the design, as well as a large back-stage storage and staging area. The building is constructed of split face CMU and laminated wood beams. The large use of woods adds a rustic beauty that fits well in the park setting.

The new structure has greatly increased the use of the park. It has become a popular spot for summer night concerts and outdoor weddings.

Project Stats:

- New park band shelter
- 2,137 square feet
- \$250,000 budget (construction costs unknown due to donated time and materials by multiple contractors)
- Completed Spring 2006
